

Wnt x Notch? Wnt & Notch?

Our lab aims to solve medically relevant basic biological questions, focusing on Non-canonical Notch signaling and Wnt/Notch crosstalk in development, homeostasis and disease.

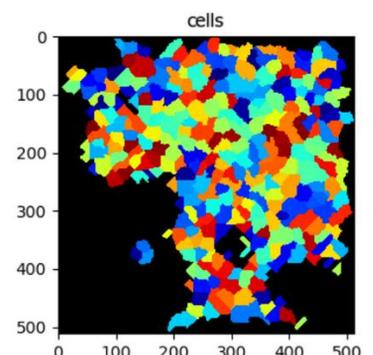

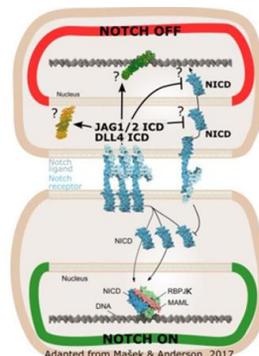

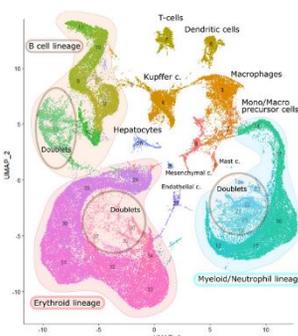

2 PhD positions are opened and well funded.

Projects aim to functionally test:

- the signaling roles of the Notch ligand Jagged 1 intracellular domain (J1ICD) in mammals

- the direct Wnt-Notch pathways interactions through the Notch receptor intracellular domain (NICD) in mammals
